

Table. Freshwater Fish of Vineyard Waters. [From Steve Hurley] Freshwaters of the Vineyard harbor an impressive diversity of largely little known fish that like the brook trout salters have survived centuries of impacts and landscape transformations and represent the vitality and future of streams on the Island. The twenty six species located in the 12 (?) streams sampled in 1988 are listed with the numbers streams each is located in.

Banded Killfish (13)
Sheepshead Minnow (11)
Inland Silverside (11)
Ninespine Stickleback (10)
Fourspine Stickleback (10)
Mummichog (10)
American Eel (9)
Rainwater Killifish (9)
Atlantic Silverside (9)
Brook Trout (7)
Tesselated Darter (6)
Golden Shiner (4)
Striped Killfish (4)
Brown Bullhead (3)
Threespine Stickleback (2)
Redfin Pickerel (2)
Chain Pickerel (2)
Northern Pipefish (2)
